

SUGARCUBE™

SugarCube SC1 Family

What's new as of version 2.4-150+

SugarCube SC1 Family

Version 2.4-150+ of October 2026:

1. **Left channel clicking:** if present, automatically clears after ten seconds of silence. Also, clears when going to **Bypass** and back.
2. **SC1-Plus Routing Mode: External** audio mode now fully functioning for all external devices in **Record Repair** and **Playback Repair** modes.
3. **For all SugarCubes: User Interface** on mobile app, desktop app or browser is generally faster and has lower latency.
4. The user interface works in Google Chrome, Apple Safari, Microsoft Edge. NOTE: we love Firefox and all the efforts at Mozilla for creating great software (they are our neighbors here in Silicon Valley.) However, Firefox uses a slightly different interpretation of certain browser languages that execute the SugarCube interface causing a few errors in displaying our UI.
6. If you contact support, please send us you device's **serial number** and **current version of software**.
7. Current release is: **2.4-155**

SugarCube SC1 Family

Features & changes as of the previous versions:

1. No more needed to **power-cycle** after an update. Your SugarCube will restart itself after an update and is ready to go.
2. Various bug fixes including internal USB pathway reworked and more stable.
3. New '**System**' tab added to '**Settings**' to control some system functions including how long the front panel display remains on, among other controls.
4. "**Peak Meter**" added to the '**Settings**' page on '**Input Level**' tab.
5. New **Startup Screen** shows the SugarCube startup progress to know when it is ready to use after power on.
6. New requirement to **power cycle** the SugarCube when a new update is installed. You will see a message to announce a new download is ready and to please power off, count to 3, then back on to complete the update process.
