b. 1st recording completes

c. 2nd recording completes

d. 3rd recording completes

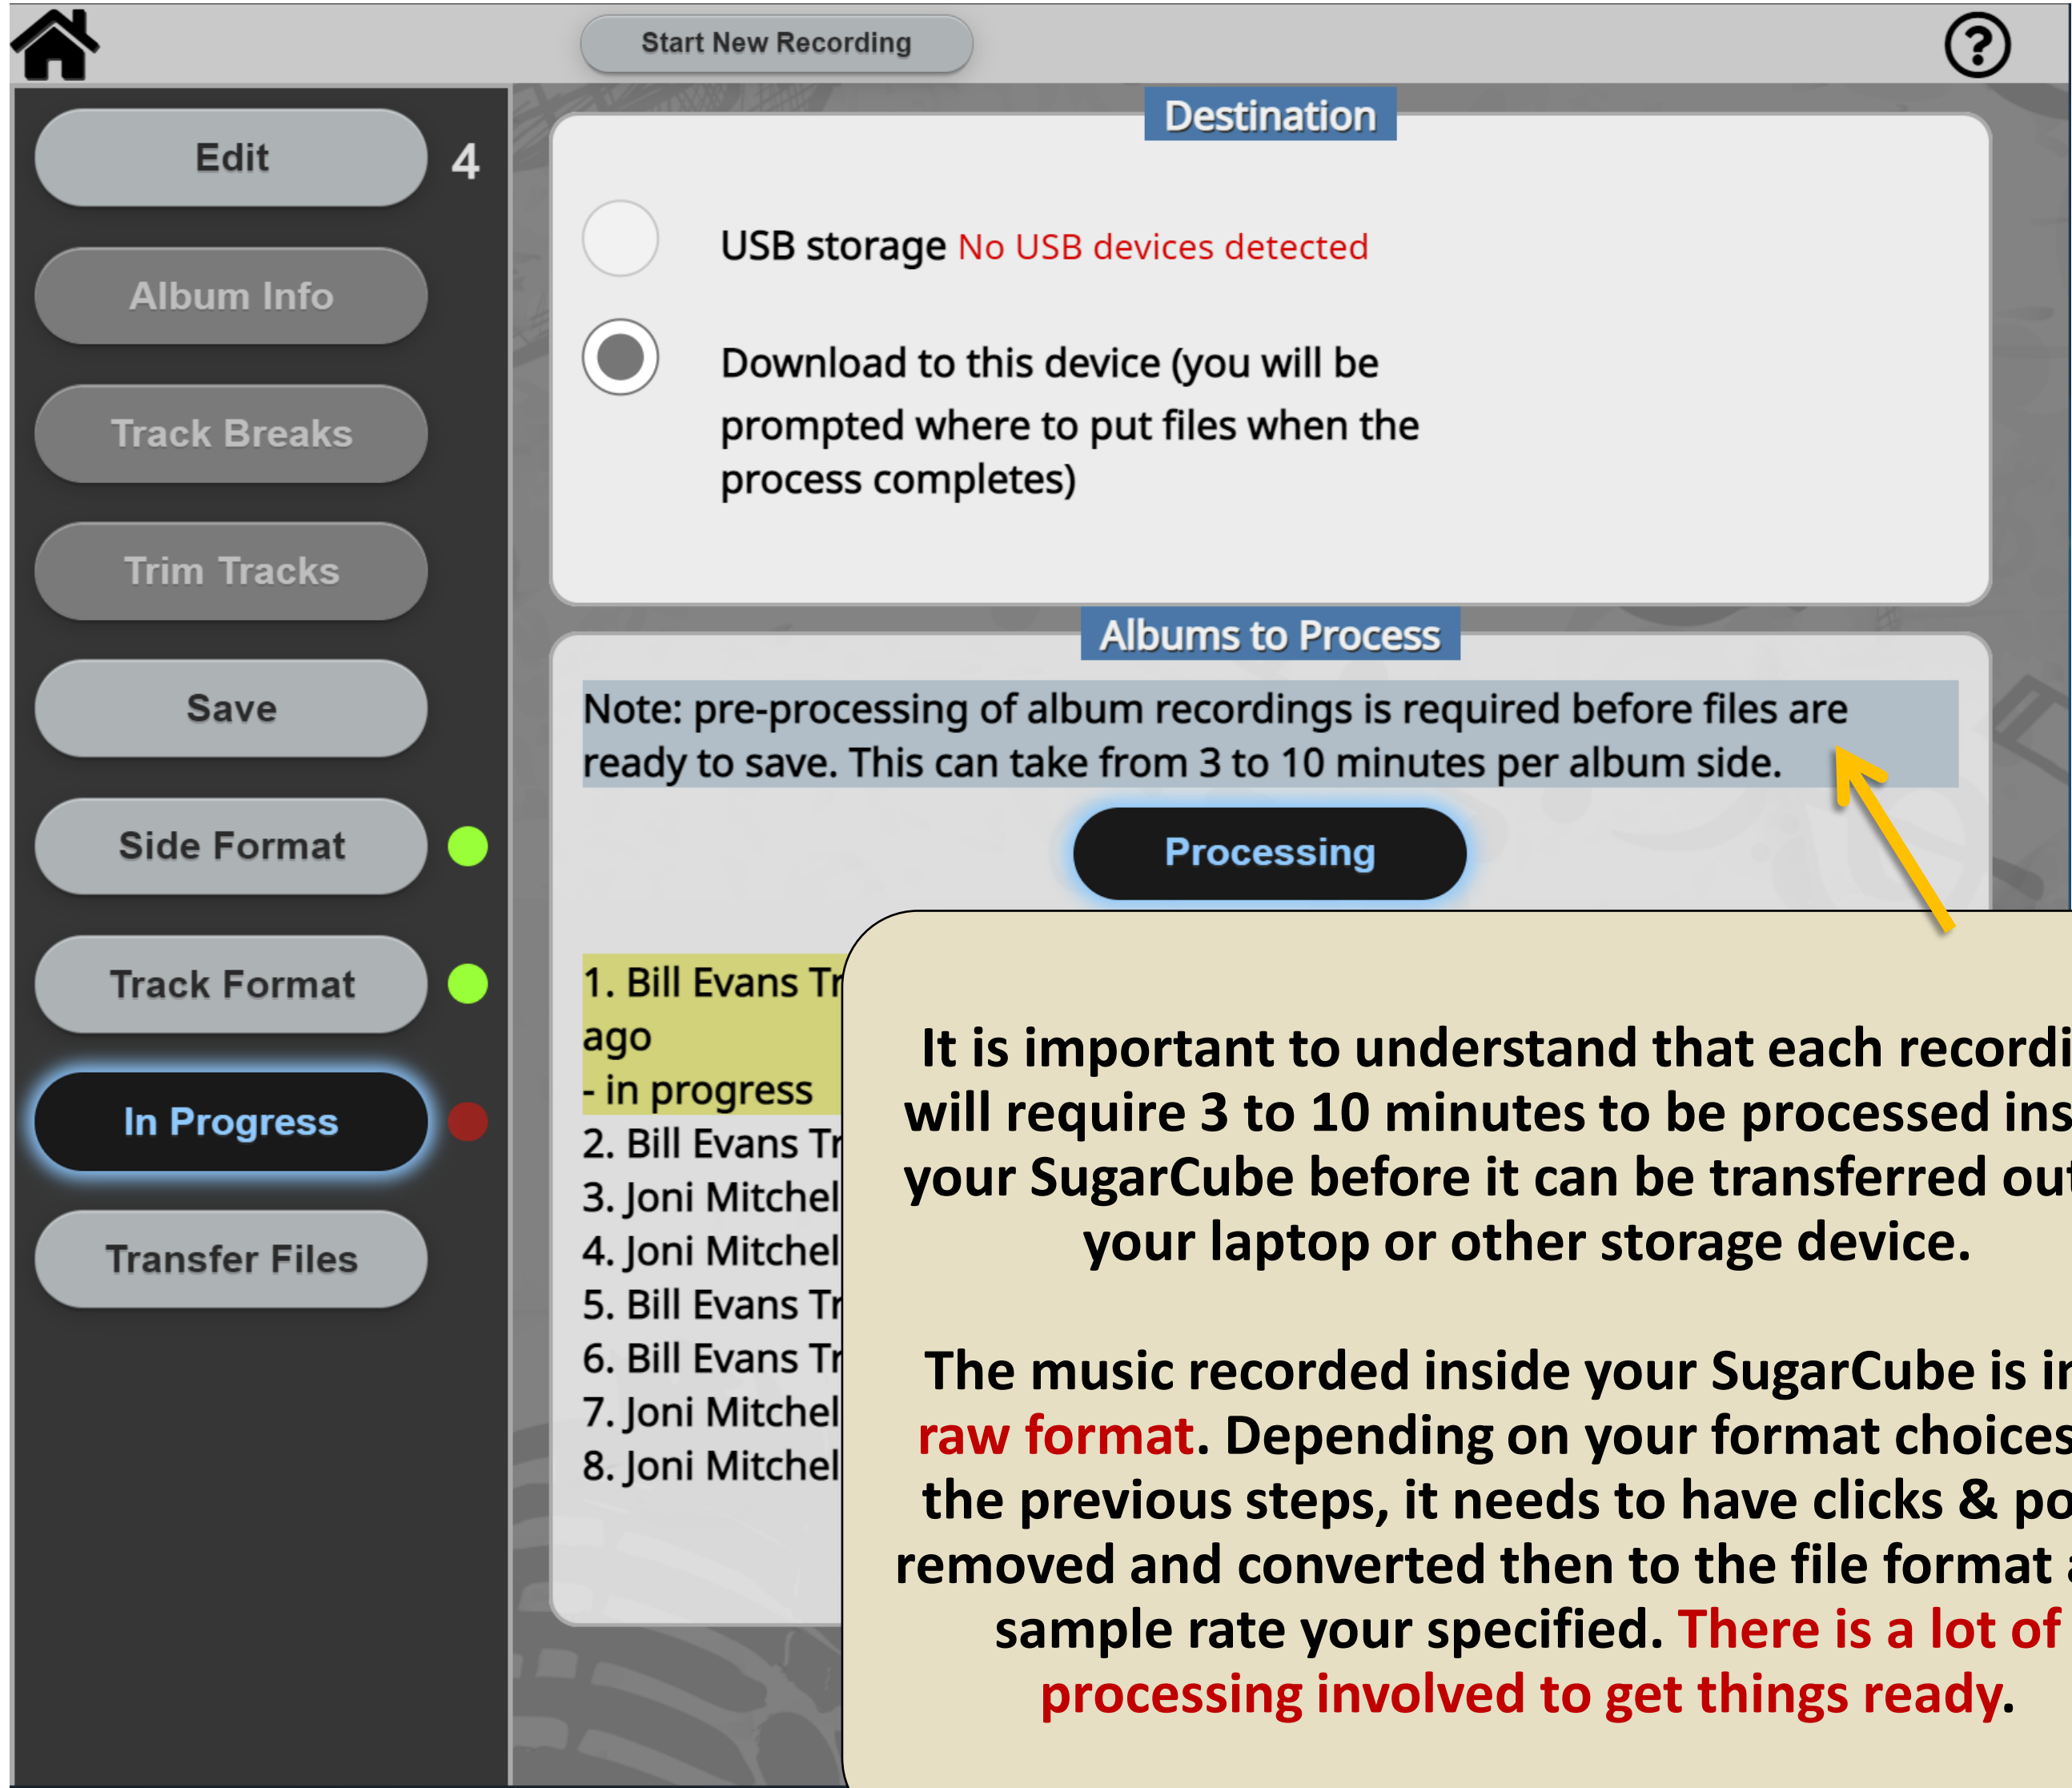

e. All done, and USB device can be removed

NOTE: each recording requires from 3 to 10 minutes of processing before it is ready to save. Once completed, saving to USB device is very fast taking only seconds.

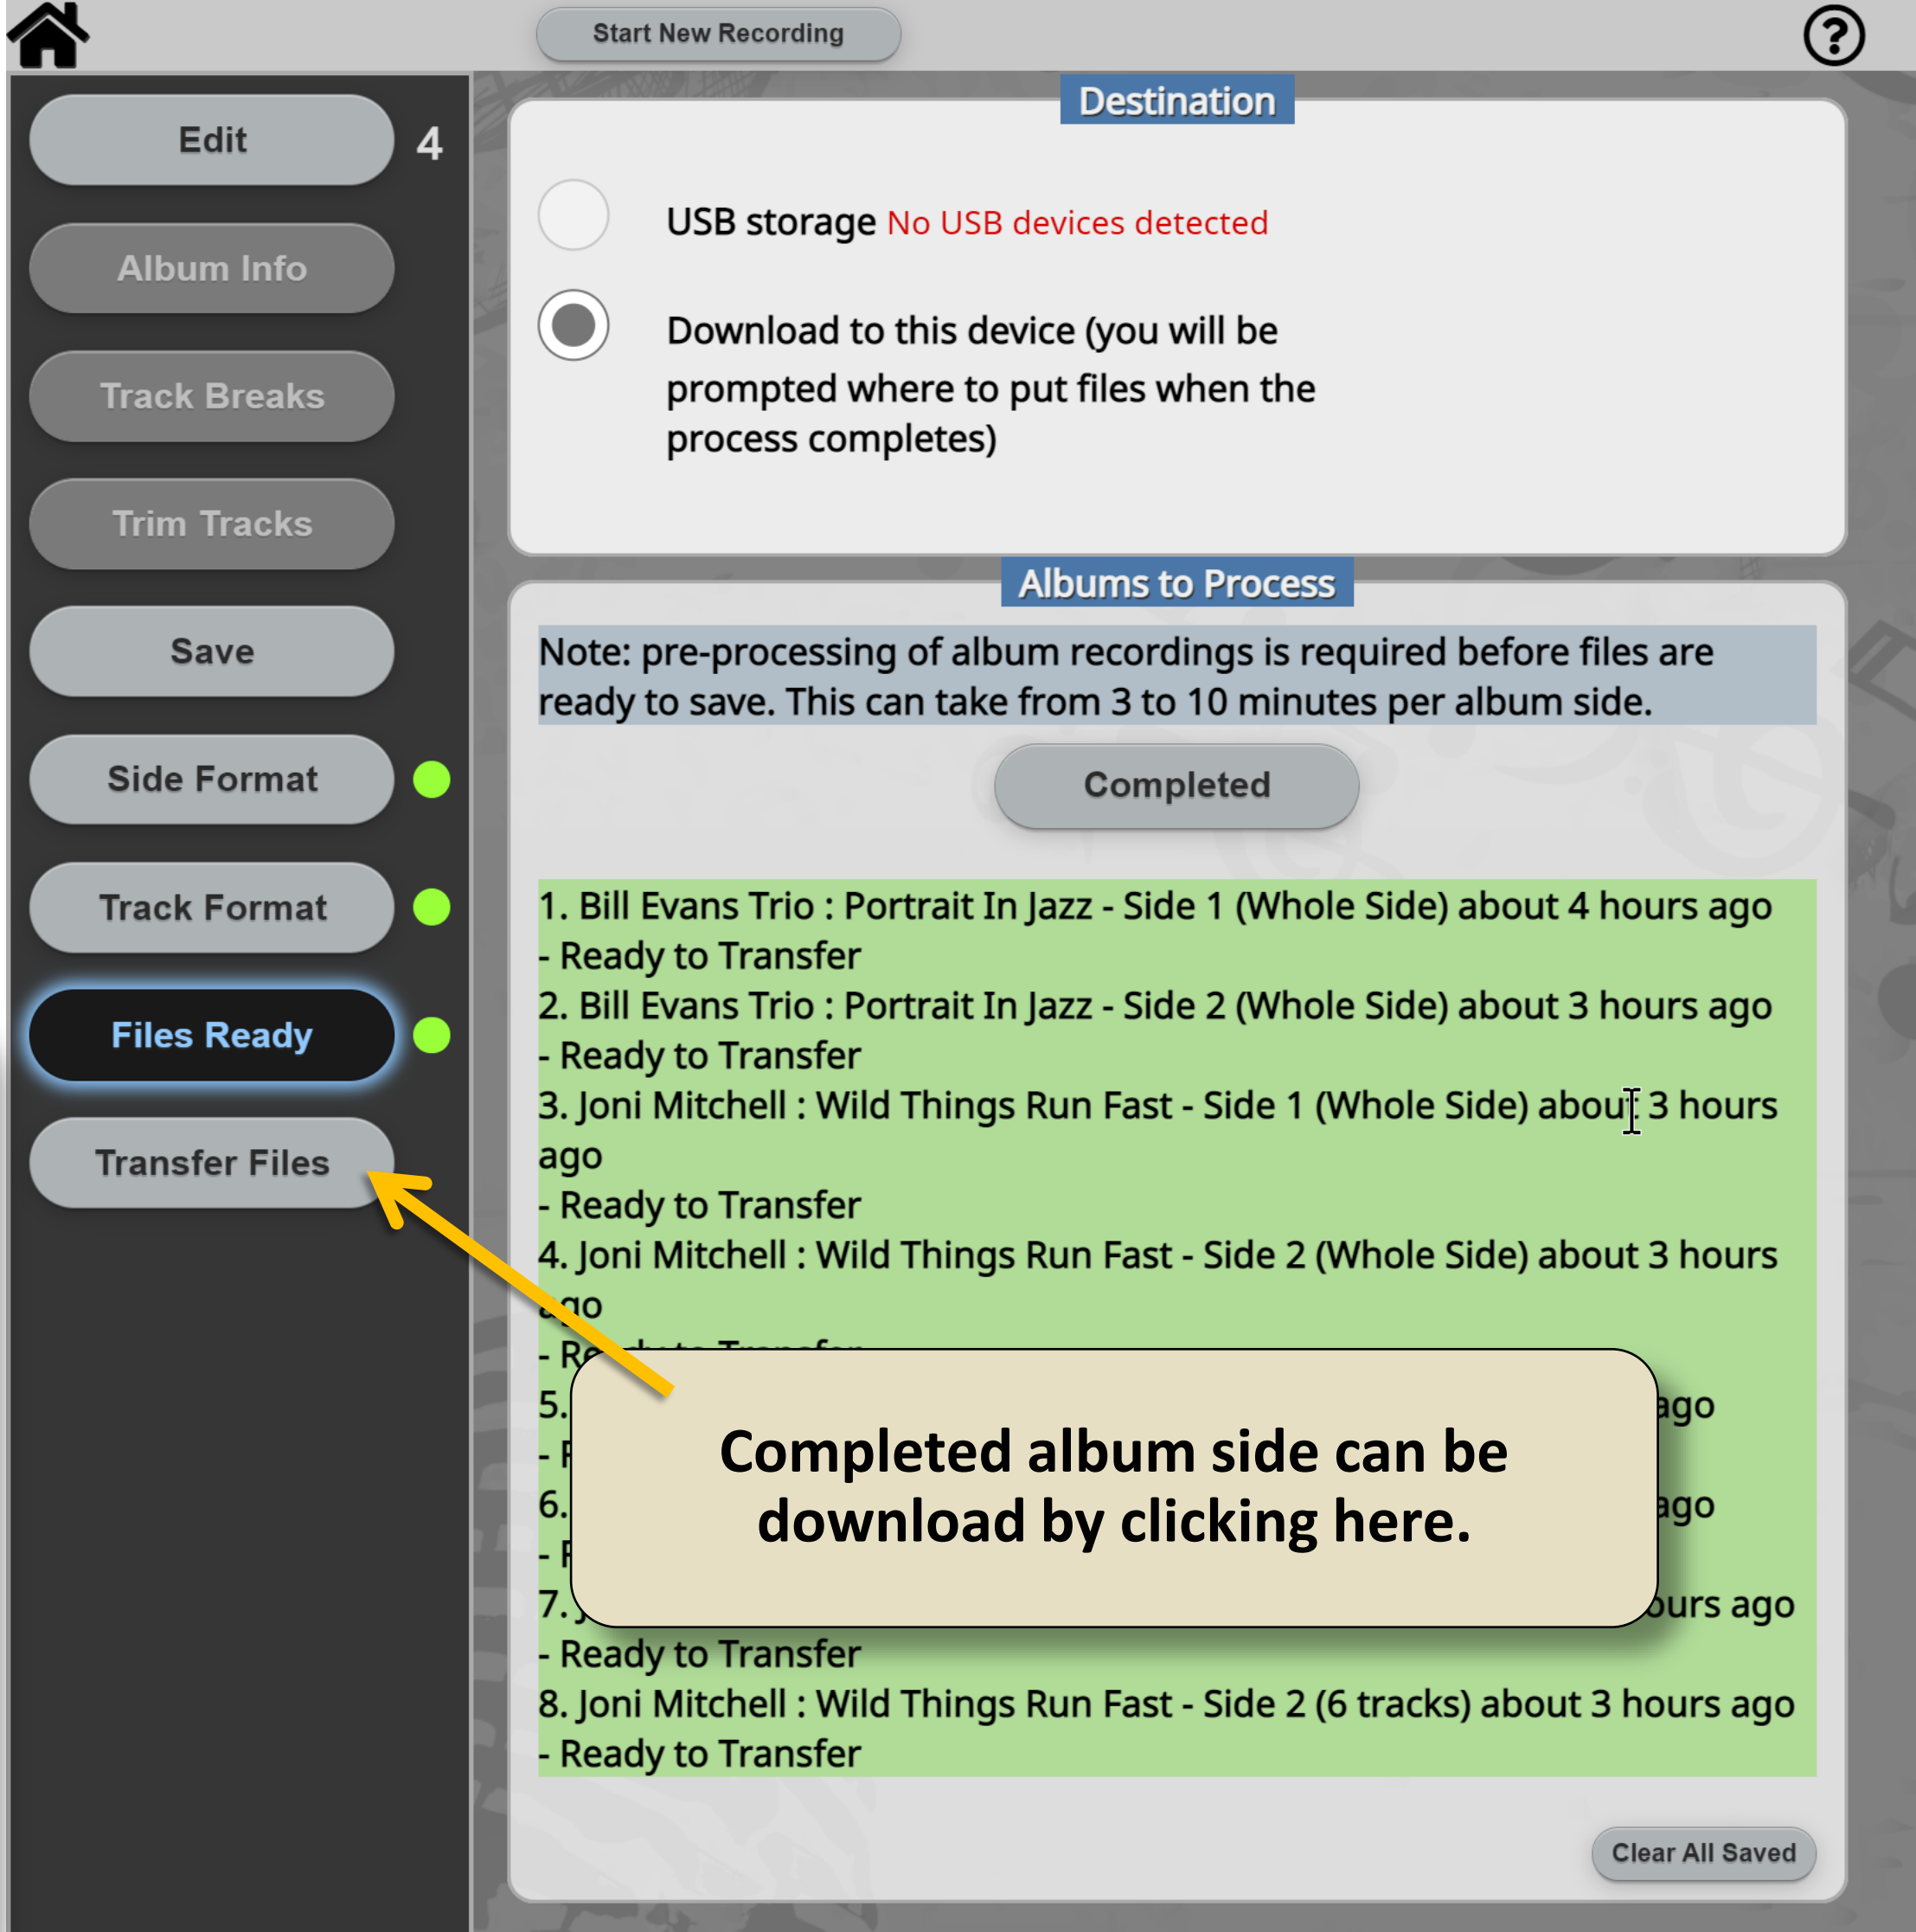

SugarCube Quick Start Recording Guide

Saving the Results to Your Local File System

It is important to understand that each recording will require 3 to 10 minutes to be processed inside your SugarCube before it can be transferred out to your laptop or other storage device.

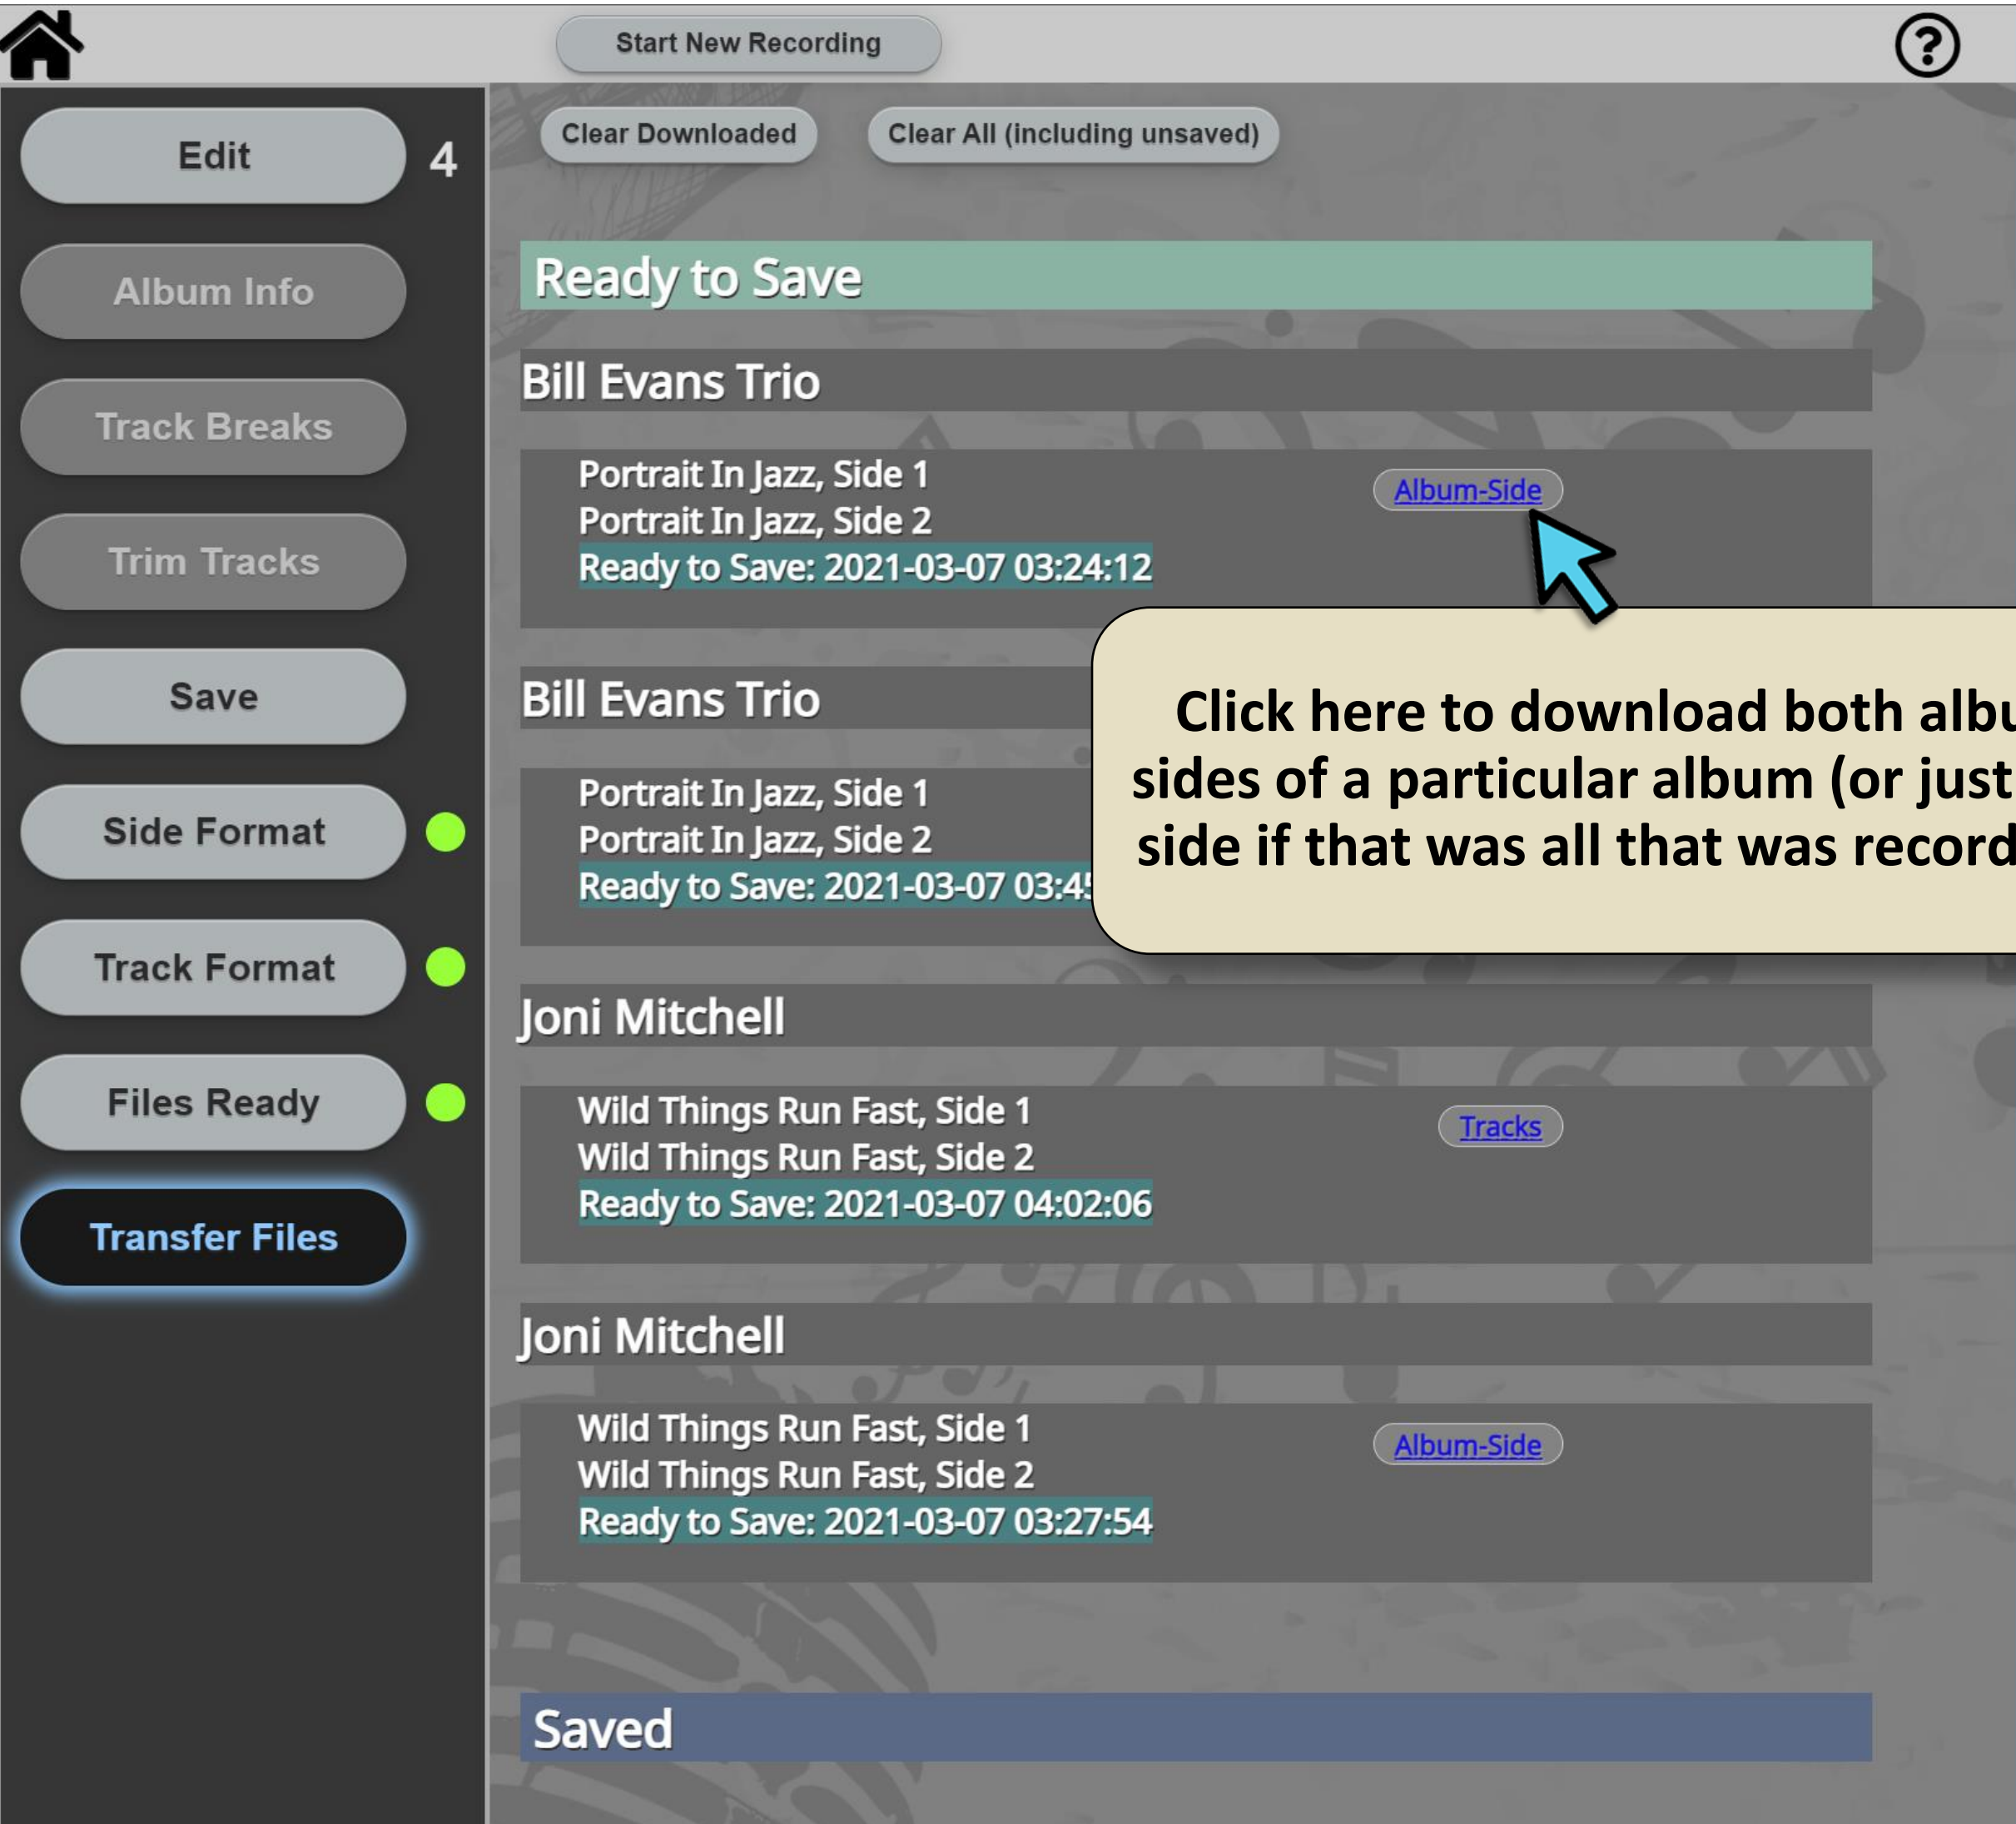

The music recorded inside your SugarCube is in a **raw format**. Depending on your format choices in the previous steps, it needs to have clicks & pops removed and converted then to the file format and sample rate your specified. **There is a lot of processing involved to get things ready.**

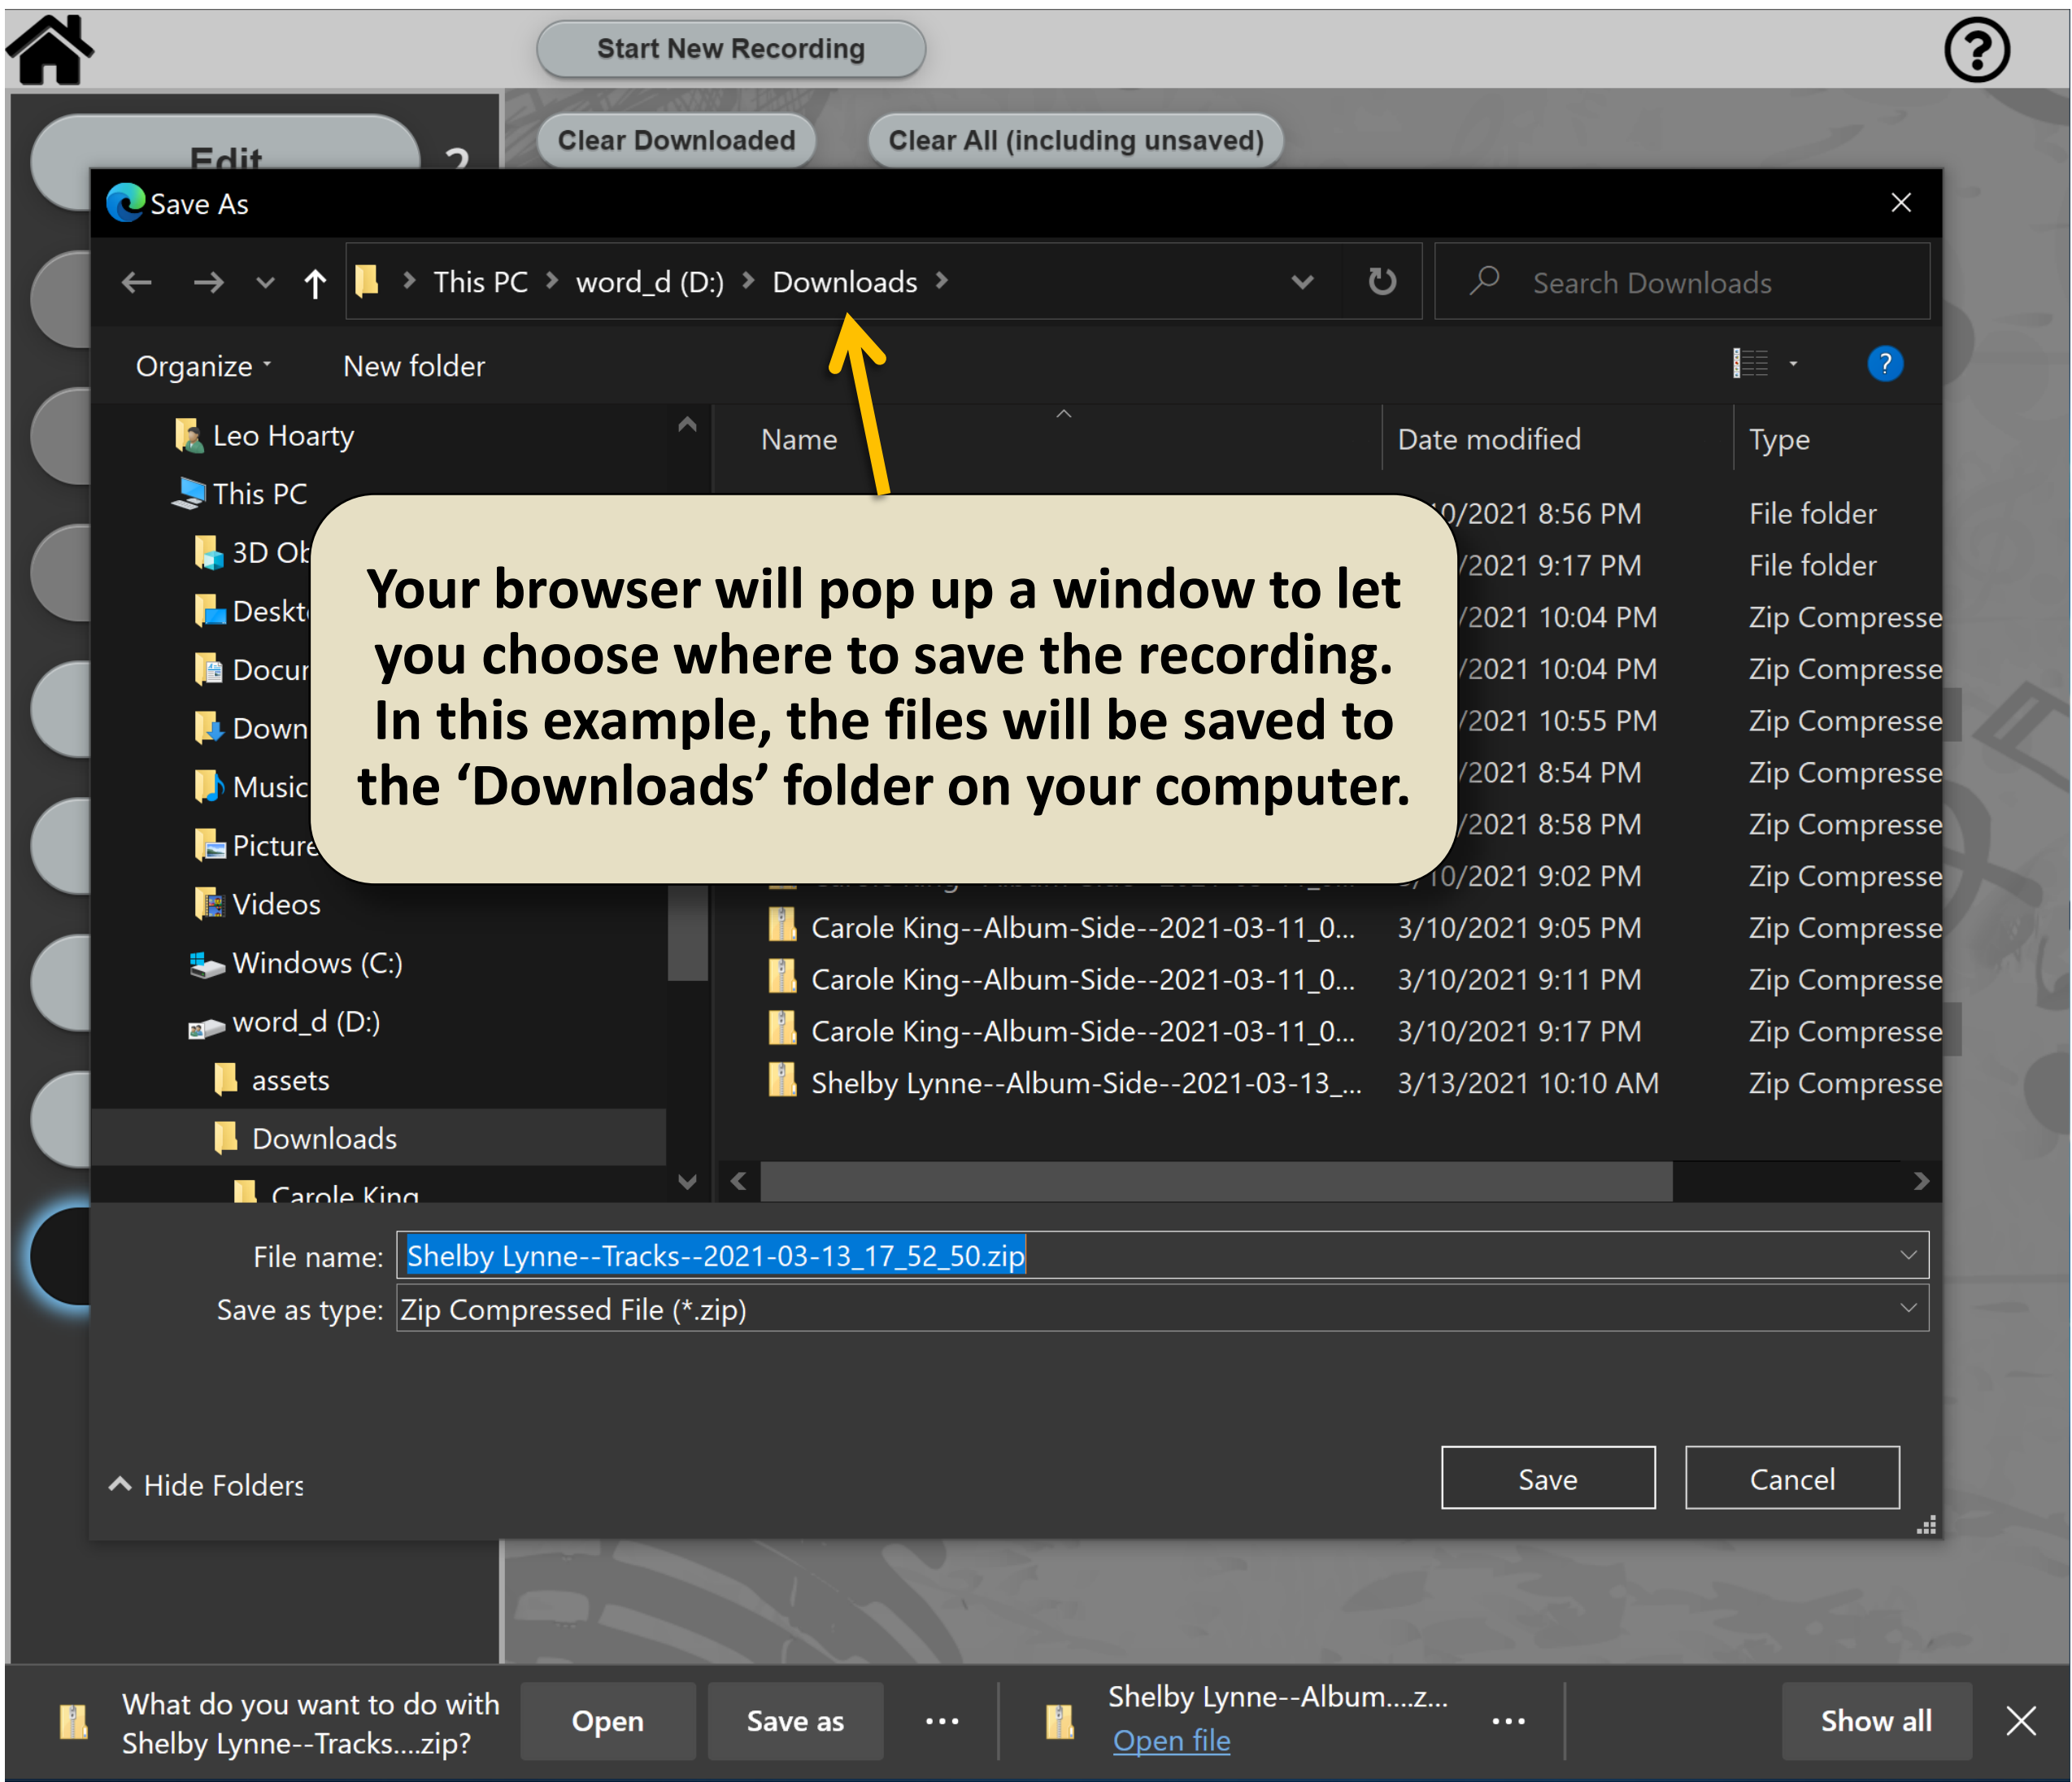

Completed album side can be download by clicking here.
