

SUGARCUBE™

SugarCube SC1 Family

What's new as of version 2.4-010+

SugarCube SC1 Family

Version 2.4-010+ of May 2026:

1. **SC1-Plus Routing Mode: External** audio mode now stable for all external devices to fully support **Record Repair** and **Playback Repair**.
2. **For all SugarCubes: User Interface** on mobile app, desktop app or browser is generally faster and has lower latency.
3. **NOTE:** after an update, please turn power off then count to 3 and power back on.
4. The user interface works in Google Chrome, Apple Safari, Microsoft Edge. NOTE: we love Firefox and all the efforts at Mozilla for creating great software (they are our neighbors here in Silicon Valley.) However, Firefox uses a slightly different interpretation of certain browser languages that execute the SugarCube interface causing a few errors in displaying our UI.
5. If you contact support, please send us you device's **serial number** and **current version of software**.
6. Current release is: **2.4-122**

SugarCube SC1 Family

New Features & Changes from the previous release:

1. Support for the **SugarCube Desktop App**. Please note this is for Windows, macOS, and Linux personal computers, not iPads or mobile devices.
2. Download link for the **SugarCube Desktop App and the User Guide** is found on the 'Updates' page.
3. Controls multiple SugarCubes from its startup screen.
4. Various internal bug fixes.

SugarCube SC1 Family

Features & changes as of the previous versions:

1. If background clicking is detected, please **press 'Bypass' twice** to clear the click removal buffers
2. No more needed to **power-cycle** after an update. Your SugarCube will restart itself after an update and is ready to go.
3. Various bug fixes including internal USB pathway reworked and more stable.
4. New '**System**' tab added to '**Settings**' to control some system functions including how long the front panel display remains on, among other controls.
5. "**VU Meter**" added to the '**Settings**' page on '**Input Level**' tab.
6. New **Startup Screen** shows the SugarCube startup progress to know when it is ready to use after power on.
7. New requirement to **power cycle** the SugarCube when a new update is installed. You will see a message to announce a new download is ready and to please power off, count to 3, then back on to complete the update process.
