

SUGARCUBE™

SugarCube SC1-Plus

What's New as of version 2.3-600+

SugarCube SC1-Plus

New Features/Changes

Below is a short list of changes in recent releases:

1. Minor cleanup of buttons.
2. Minor adjustment to various defaults.
3. Internal software bug fixes.

SugarCube SC1-Plus

Features/Changes from Jan 2022

1. If background clicking is detected, please **press 'Bypass' twice** to clear the click removal buffers.
2. No more needed to **power-cycle** after an update. Your SugarCube will restart itself after an update and is ready to go.
3. Various bug fixes including internal USB pathway reworked and more stable.
4. Noise Reduction: obscure bug found and fixed, should now work as expected.
5. EQ settings should now work as expected whether with Noise Reduction or stand alone.
6. Exact software version number now displays on the main menu.

SugarCube SC1-Plus

Features/Changes from Aug 2021

1. New '**System**' tab added to '**Settings**' to control some system functions including how long the front panel display remains on, among other controls.
2. "**VU Meter**" added to the '**Settings**' page on '**Input Level**' tab as well as to the **Routing** page.
3. New **Startup Screen** shows the SugarCube startup progress to know when it is ready to use after power on.
4. New requirement to **power cycle** the SugarCube when a new update is installed. You will see a message to announce a new download is ready and to please power off, count to 3, then back on to complete the update process.
5. When using **Noise Reduction**, the process now waits for the needle drop before sampling noise. So, no hurry, just **Start** the **Noise Reduction** process and it will wait for you to get to the turntable.

SugarCube SC1-Plus

Features/Changes from Feb 2021

Below is a short list of changes from the previous release:

1. **"Bypass"** on the front panel or on the menus now resets the internal timing in the event an externally connected computer or music server has left the SC1-Plus at an incompatible sample rate (anything other than 192k/24bit.)
2. **"Repair", "Routing", and front panel buttons** are now fully synchronized and consistent in mode.
3. **Stability:** a bunch of software issues have been fixed.
4. **Power Cycle after an update:** after a software update, please turn off your SugarCube, count to three, and power back on.
5. **Mute Speakers:** when changing digital modes (SugarCube-Only, Repair Record, Repair Playback, & External Only) in case the external computer or music server generates some digital noise.
